Art Unit: 1761

A certified copy of the foreign priority document is in the case and the appropriate box on the 326 form has been checked. Examiner has made a request for a refund of the one month extension of time to the appropriate individual but examiner cannot actually refund any amount of money to applicant.

Applicant's election with traverse of with in Paper No. 6 is acknowledged. The traversal is on the ground(s) that the search of the apparatus would not be an undue burden upon the examiner. This is not found persuasive because the search for the apparatus would not normally be required in a search for a process, particularly when the process is restricted to foods.

The requirement is still deemed proper and is therefore made FINAL.

This application contains claims 1-4, drawn to an invention nonelected with traverse in Paper No. 6. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 5 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by van Heteren or Bodor for reasons of record.

Applicant argues that the prior art patent utilizes a CTM or cavity transfer mixer and not a single-screw mounted in a barrel. This argument has been considered but is not persuasive because the structure utilized, as illustrated in figure 1 clearly meets

Art Unit: 1761

these required limitations. Applicant argues that the apparatus used in the process necessitates a longer cooling time but does not require excessive cooling. If applicant intends to indicate a particular screw design that is important to the process, then the claims should be amended to define over the prior art argued by applicant. As an example, applicant might consider amending claim 5 to insert –Archimedean helical- at page 18, line 10, before “single-screw” to define the cooler design set forth at page 6, third paragraph. Applicant argues the advantages of the design without modifying the claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
